Appendix	A - Z

How to find replacement parts using the Appendix

For ease in finding replacement parts (gaskets, o-rings, springs, spacers, etc.) DBL has set up an appendix with full parts breakouts. In the **appendix**, look up the name of the item you want to find parts for. When you find the item, you will be referred to a page containing the parts breakout for that particular item.

Example: If you are looking for replacement parts for a Betts Standard Wet-R-Dri Valve, you simply look under the **valves** category in the **appendix** for a Betts Standard Wet-R-Dri valve and turn to the appropriate page. On this page you'll find a parts breakout. Find the replacement part you need and write down the item number(s) or letter(s), the description, and the appendix page number. When calling in an order to DBL or to discuss a part, please reference the appendix page number, the replacement part item number and the description. This information helps cut down on errors in ordering and will help ensure that you will receive the necessary part or parts. It also helps when discussing parts with our customers. Knowing that we are both looking at the same diagram and talking about the same part greatly increases accuracy. If you cannot find the part you are looking for in the appendix, call DBL and we will do our best to help you find what you need.
